

First announcement

SOHO 20 - Transient Events on the Sun and in the Heliosphere
Ghent, Belgium
August 27-31 2007

web: www.soho20.org

email: soho20@sidc.be

venue: "Het Pand", downtown Ghent, Belgium

SOHO has successfully celebrated one full solar cycle of observations, and enriched our knowledge with new discoveries. Among them a large variety of transients have been identified. It is now time to review and discuss them.

Within this context, early results from the SOHO partnerships with STEREO and HINODE, and plans for the Solar Orbiter and Sentinels will be hot topics at SOHO20.

Areas of Interest include:

- Flares, Coronal Mass Ejections, Solar Energetic Particle events: the big picture
- Precursors, initiation and transport of transient events
- The full spectrum of transients, and their inter-relation
- SOHO synergies with past, present and future missions, methods and models

The program will combine invited and contributed talks, and a healthy level of discussion will be encouraged. There will be plenty of space provided for posters.

Please register your interest at www.soho20.org and use the conference email address soho20@sidc.be (or the website's 'Contact' section) if you have questions regarding any aspects of the meeting. Institutes are encouraged to request a meeting poster as soon as possible.

On behalf of the SOHO 20 organizers,

Jean-Francois Hochedez

SOHO20 **TRANSIENT EVENTS**
ON THE SUN AND IN THE HELIOSPHERE
